METHODS OF SUPERVISION

In line with the Insurance Supervisory Engagement model, the frequency and depth of supervisory activities is driven by the risk profile of the insurance or reinsurance undertaking.

Targeted Risk Assessments are aligned with the Risk Structure as outlined below:

The depth of each Targeted Risk Assessment ranges from desk based reviews to detailed onsite investigations and recalculations, depending on the level of Risk associated with the Risk Category in question. Similarly, the frequency and depth of regular supervisory activities such as interviews with management personnel is influenced by the overall risk level of the firm.

Please refer to the Central Bank of Ireland's [PRISM EXPLAINED](#) document for further detail on our supervisory processes.
